maddalena®

METERING EXPERTISE

Let me explain our Mission, Vision and Values related to this concept: Our Companv – Maddalena S.p.A.

Water is one of Earth's most precious resources, essential for life and our daily activities. From drinking and cooking to washing and gardening, we rely on water in countless ways. However, water is a finite resource, and with climate change and population growth, it's becoming increasingly important to use it wisely. Every drop ofwater we save helps ensure there's enough for everyone, now and in the future. Simple actions like fixing leaks, using water~efficient appliances, and being mindful ofour water usage can make a big difference. Remember, every drop counts!

METERING EXPERTISE

Digital transformation drives non-revenue water reduction

Digitalization is revolutionizing the way water utilities manage their assets, leading to significant improvements in efficiency, reliability, and sustainability. By integrating advanced digital technologies, water utilities can better monitor, analyze, and optimize their operations.

maddalena®

METERING EXPERTISE

Real-Time Monitoring and Leak Detection: Utilizing sensors, meters, and pressure gauges, water utilities can gather realtime data on water flow, pressure, and consumption. Advanced analytics and machine learning algorithms can detect leaks and pinpoint their locations, enabling targeted repairs and reducing water loss.

maddalena®

METERING EXPERTISE

Predictive Maintenance: Digital tools allow for predictive maintenance strategies by analyzing data on flow rates, pressure changes, and equipment performance. This helps utilities anticipate maintenance needs and address potential issues before they escalate, minimizing downtime and repair costs.

maddalena®

METERING EXPERTISE

Comprehensive Asset Management: Digital platforms provide a holistic view ofinfrastructure, including pipes, valves, and meters. This helps identify aging or deteriorating assets, prioritize maintenance, and plan for replacements, ensuring the longevity and reliability ofthe water network.

maddalena®

METERING EXPERTISE

Pressure Management: Excessive pressure can lead to burst pipes and increased leakage. Digital tools enable active monitoring and control of pressure levels, optimizing the distribution network and reducing the likelihood of leaks.

maddalena®

METERING EXPERTISE

Data-Driven Decision Making: The integration of digital technologies facilitates the collection and analysis ofvast amounts ofdata. By embracing digitalization, water utilities can enhance their asset management practices, ensuring a more efficient, reliable, and sustainable water supply for their communities. This data-driven approach supports informed decision-making, helping utilities implement effective water management strategies and improve overall service delivery.
